

HIP & KNEE CENTER

The UW Medicine Hip & Knee Center provides surgical treatment and comprehensive care of simple and complex disorders of hip and knee joints, from diagnosis through rehabilitation. Our expert team includes orthopedic surgeons, rehabilitation medicine physicians, physician assistants, nurses, and physical and occupational therapists.

We treat the following conditions:

- Congenital disorders
- Developmental hip dysplasia
- Osteoarthritis
- Metastatic disease
- Rheumatoid arthritis

We offer the following services:

- Comprehensive rehabilitation therapy
- Direct anterior hip replacement
- Knee arthroscopy
- Management of complex total joint problems, such as revision, infection and fracture
- Minimally invasive replacement surgery
- Realignment of knee structure
- Surgical management of hip impingement
- Total and partial joint replacement/revision

The center welcomes patients who need care at any level – from patients who have suffered from chronic pain or discomfort to those who are active but have developed arthritis or an injury. We use a patient-centered, multidisciplinary approach to develop an individualized treatment plan with the goal of restoring the greatest possible hip and knee function. We encourage our patients to actively participate in decisions affecting their care. Our focus is their ongoing ability to pursue their passions and activities.

Patients who choose the Hip & Knee Center benefit from the latest technological innovations and advanced knowledge gained from our research at the UW School of Medicine. The center also serves as a gateway to other specialized services and resources throughout UW Medicine, such as pain management and rheumatology.

When it comes to healthcare, patients can choose from many options, and we strive to make that choice easier by providing excellent access to the exceptional care available at UW Medicine.
