John I. Clark, Ph.D.
Director, Willed Body Program

Give the gift of knowledge and life.
The Willed Body Program at the University of Washington, School of Medicine, provides an opportunity for the public to contribute to a crucial need in the education of medical doctors, nurses, dentists and other health professionals such as physical and occupational therapists. Your donation will play a crucial role in helping health professional students master the complex anatomy of the human body and will allow medical students to develop and maximize important tools to help their patients. The study of human anatomy is an essential element in the training of health professionals and is the basis for all of their future training.

Points to consider

- We are a whole body donation program for donors from Washington State. Our program must receive the body in our facility within 24 hours of a donor’s death.
- While program registration is recommended in advance, no donation can be guaranteed until the actual time of death (call the program for full details). Please note that donor registration is not binding; donors may recind their registration or simply opt out of donation at any time.
- Donations may remain within the Willed Body Program for up to three years.

NOTES OF APPRECIATION FROM MEDICAL STUDENTS

“ I can’t even begin to express my gratitude to you and your family for giving me a lifetime experience to study, understand and appreciate the complexity and beauty of the human body which would not have been possible without this generous and noble donation.” - Sharon

“ Words will never fully describe what an invaluable learning experience this has been. Without a doubt, I’m certain that your loved ones were incredible, selfless individuals. Again, I’m incredibly grateful and look forward to using my knowledge to help my future patients.” - Scott

The study of human anatomy is an essential element in the training of health science professionals and is one of the first and most important courses in their education.
