

# MEN'S HEALTH CENTER

---

The UW Medicine Men's Health Center cares for men with urologic, sexual, hormonal and reproductive health problems, often due to age-related illnesses or conditions, including cardiovascular disease, diabetes and cancer. Conditions include:

- Benign prostatic hyperplasia (BPH)/enlarged prostate
- Erectile dysfunction (ED)
- Elective sterilization
- Hypogonadism/low testosterone
- Male factor infertility
- Male urinary incontinence
- Peyronie's disease
- Varicocele

## *Partnership of Care*

One of the best things men can do to protect their health is establish a relationship with a healthcare professional they are comfortable with and trust. Our professionals are experienced in progressive medical therapies and minimally invasive procedures. Our experts not only offer highly customized treatments, beyond just medication, aimed at restoring urologic, sexual, hormonal and reproductive health, but also know when seemingly routine conditions are actually early warning signs or risk
